10/17/72 Many thanks for getting the Denver Post Wecht, Morgan stories. Guess that is the full AP report in Cyril. The interview with Morgan, the one that seems to have started itall, does add materially. Its indictment of the Commission for faking is incredible. Its self-indictment is inherent. And to say the X-rays were made with incompetence! He really says that the Commission concluded what he had to know was impossible. He is, however, quite wrong, in fine detail, beginning with his interpretation of the Zapruder film and the position of the head at impact. He may have a point on bone fragmentation from a front shot. I don t know. But his own report shows metal distribution at the front impossible from a rear shot and consistent with very soft , almost unjacketed ammot from the front only. I don't go into it in detail in Post Mortem because it is technical and arguable, but Bernabei has done a fine paper, based on his own ballistics experience. Many thanks, HW
